

EDUCATION

Bachelor of Science, Computer Science (Cybersecurity) -
Georgia State University - Atlanta, GA | 3.90 GPA

Expected May 2026

Clubs & Organizations: Cybersecurity club, Programming club.

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Networks, Software Engineering, Calc III, Linear Algebra.

PROJECTS

[Automated Facial Recognition Door Lock](#) | Python, OpenCV, KNN, JSON

- Developed an automated access system using OpenCV and Haarcascade classifiers for real-time face detection.
- Implemented the K-Nearest Neighbors (KNN) algorithm to classify faces from a dataset and dynamically manage access.
- Engineered a scalable JSON-based structure to efficiently manage and update user permissions and access control.
- Boosted system accuracy to 95% by implementing feature normalization techniques, ensuring reliable continuous authentication.

GSU Panther Chatbot | React, Node.js, Supabase, Pinecone, OpenAI API

- Architected and developed a full-stack AI academic assistant for GSU students using React.js (frontend) and Node.js/Express.
- Integrated the OpenAI API (GPT-4) with a Pinecone vector database to provide contextual, grounded responses for course planning and scheduling.
- Managed user data, file storage, and authentication via Supabase (PostgreSQL) to ensure a secure, scalable platform for GSU students.

Intelligent Word Prediction Bot | Python, TensorFlow, NLP, LSTM, Base64

- Developed a real-time, voice-interaction system integrating Python's speech recognition APIs with TensorFlow-based NLP pipelines.
- Leveraged LSTM (Long Short-Term Memory) architectures for advanced sequence prediction and contextual response generation.
- Implemented Base64-encoded model persistence to ensure rapid and accurate model loading and intelligent automation solutions.

[UFC RSVP Page](#) | Figma

- Constructed a dynamic RSVP and advertising website for a UFC event, integrating both web development and UX design principles.
- Implemented core features using HTML, CSS, and JavaScript, including a functional navigation bar and responsive design.

Dynamic TCP/UDP Client-Server System | Python, Wireshark, Sockets, Threading

- Built TCP and UDP client-server programs supporting dynamic, real-time message processing.
- Implemented a multi-threaded TCP server to handle multiple clients concurrently.
- Developed a lightweight UDP server for fast, connectionless message handling.
- Tested multi-client interactions across terminals to verify correctness and reliability.

WORK EXPERIENCE

Technical Director and Lead graphics operator | Leading the Way | Atlanta, GA | (Independent Contractor)

Sep 2022 - Present

Utilized Xpression software to organize and lead an international television broadcast reaching over 260 million viewers across the Middle East via three major satellites: Nilesat, Arabsat, and Hotbird. Gained valuable experience working in high-pressure, zero-error scenarios, ensuring seamless transmission and delivery to a diverse audience. Facilitated front-end translation and communication in the team by directly transcribing TV graphics from English to Arabic, speeding up the preparation and saving hours of work.

Knack Tutor | Georgia State University | Atlanta, GA

Aug 2025 - Present

Tutored students in a variety of subjects including Linear Algebra, CS 1302, and Physics 1211. Helped students achieve an average of one letter grade on their assessments.

SKILLS

- **Web & Full-Stack:** JavaScript, React, Node.js, HTML, CSS, SQL, REST APIs.
- **Certifications:** CCNA, Google UX design, Codepath web development.
- **Programming Languages:** Python, C, HTML, SQL, Java, R.
- **Languages:** Arabic, German, English.

VOLUNTEER ACTIVITIES

- **Food and beverage coordinator:** Volunteered with the Motherless Son Foundation at Truist park, preparing thousands of meals served to community members. Assisted in the organization and stocking process of food and beverages.
